

Dailoqa

- AI-native consulting for financial institutions across global markets

Introduction

Dailoqa is an *AI-native, engineering-led* consulting firm helping banks and financial institutions unlock value at **enterprise scale** through proprietary tools and deep industry expertise.

We drive speed, agility, and intelligent growth across Europe, APAC, the Middle East, Africa, and Australia by combining domain leadership with scalable AI solutions.

01

Company Overview

Global presence

Dailoqa operates across the UAE, UK, Switzerland, Africa, India, ASEAN, and Australia, tailoring engagements to regional regulatory and market dynamics.

Our international footprint enables rapid deployment, local compliance alignment, and cross-market knowledge transfer to accelerate transformation.

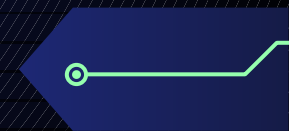

Leadership team

A leadership team of 25+ seasoned veterans, including former CIOs, bank business heads, and senior partners from top consulting and tech firms.

This blend of industry and technical leadership ensures pragmatic governance, risk-aware AI adoption, and measurable business outcomes.

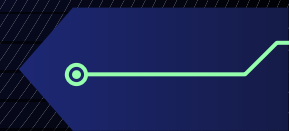

Value proposition

Dailoqa combines *engineering-led delivery* with deep financial services expertise to unlock **enterprise-scale AI value**.

We accelerate time-to-impact through proprietary assets, pragmatic governance, and measurable business outcomes across risk, ops, and customer growth.

02

AI Solutions

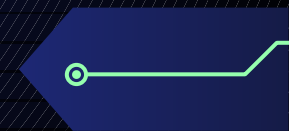

Enterprise AI strategy

We design end-to-end AI roadmaps aligned with business goals, regulatory constraints, and operational readiness.

Deliverables include target operating models, governance frameworks, and prioritized use-case pipelines to ensure scalable adoption.

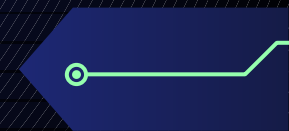

Proprietary tools

Our tooling includes reusable ML pipelines, model risk controls, and deployment accelerators that reduce build time and operational risk.

These assets enable repeatable, auditable implementations and faster ROI across regions.

Industry use cases

We deliver high-impact solutions in credit risk scoring, fraud detection, customer personalization, and process automation.

Each use case emphasizes measurable KPIs, compliance alignment, and seamless integration with legacy systems.
